

## BRIAN HAN

I am currently at senior at USC seeking an internship where I can put the web design and development lessons I have learned over the past 4 years to practice. I believe that working for an industry-leading company such as Google will help prepare me for a life-long career in the field.

I have a passion for technology, and find special joy in teaching new skills to those who may at first seem technologically challenged, such as teaching my grandfather how to use G-chat so he could see his cousin in Busan, South Korea for the first time in 40 years. My love of teaching has led to my current job as a T.A. at U.S.C.'s Information Technology Department in the Viterbi School for Engineering, which I am enjoying immensely.

My hobbies include coding in Python, watching (good) scary movies, and practicing my Spanish with my cat and girlfriend (not the same person I swear).
